Getting started

Welcome to the open banking portal of Isracard Group!

This platform enables service providers with an Israeli PSD2 license, a secure access to the financial information of customers that gave their consent to share the data.

Access is available via REST APIs in HTTP protocol and the The following steps describe how to connect to our API services, please follow these guidelines:

Step 1: Issuing regulatory certificate

In order to access our API services you need to receive 2 certificates in the eIDAS standard, signed by the CA of the regulator. These certificates (QWAC + QSEAL) will enable you access to the testing environment as well as the production environment below.

Please note, if you do not have the 2 certificates, it will not be possible to experiment in the sandbox environment and access to the API infrastructure in the production environment will not be available.

Step 2: Log in and access the APIs

You can access the API documentation that contains information and technical instructions on how to use and integrate with the APIs and gain hands-on experience in the Sandbox environment.

If you have any problem, please contact us filling out the contact form in through our support OBIsracardGroup@isracard.co.il
